VG81

A Dish for the Whole Family with Daily Balanced Nutrition

Better nutrients, Promotes detoxification

Japanese medical studies on gastrointestinal tract shows that even for those with regular bowel movement, there is still around 6 to 10 pounds of stools trapped in your digestive system.

World Health Organization (WHO) reported that colorectal cancer is the second leading cause of cancer death worldwide.

Dried and Hardened Feces are the Root Causes of Diseases

“A day without pooping is even more harmful compared to smoking three packs of cigarettes”. The toxicity causes by the dried and hardened feces are harmful as the toxins will be reabsorbed in your gut and resulting in:

- Colitis
- Colon ulcer
- Colonic diverticulitis
- Colon cancer
- Rectal cancer

Give Yourself a Time To Overhaul Thoroughly

It is important to clean and detox your body regularly to help your body organs works healthily and in working order. Therefore, a healthy gut starts from a sufficient intake of fiber!

Why Do You Need Fiber?

1) You will poop more easily

Dried and hardened feces push against the colon wall, causes damage to the intestinal mucosa layer, affecting the gut to function normally and lead to slow peristalsis movement. Dried and hardened feces makes you poop harder. Fiber can make your poop softer, making them easier to pass through the body. According to a 2012 review, fiber increases the stool frequency in patients with constipation. ⁽¹⁾

2) You will lose your weight

High fiber foods were known to be more filling than low-fiber foods. According to a 2009 review, those with high-fiber diets will have weight losses of approximately 1 kg over an 8-week period comparing than those with control diet. ⁽²⁾
On the other side, weight loss achieved with fiber-supplemented diets and control diets over 8-week period, respectively, were 4.9% and 2.9% lower compare to initial body weight. ⁽²⁾

3) Reduce your risk of getting colon cancer

Fiber acts as a wonderful scrubbing brush that cleans our gastrointestinal tract, keeping it healthy and reducing carcinogenic activity. According to 2015 research, both soluble and insoluble fiber play a role in protecting against colon cancer. ⁽³⁾

How Much Fiber Do You Need?

According to Malaysia RNI (2005), 20 to 30g of fiber intake per day is recommended for all age groups.

Besides intake from food, fiber supplements may play an important role in helping you to achieve fiber intakes approaching the recommended guidance levels.
